1	WHAT IS CLAIMED IS:
2	1. A direct current brushless motor with axial winding and radial
3	air-gap, comprising:
4	an upper housing, made of a magnetic conducting material,
5	having an axial hole;
6	a lower housing, made of a magnetic conducting material, having
7	an axial hole;
8	a coil seat, being a housing made of an insulating material formed
9	by a metallic wire functioning as an axial winding, the metallic wire having an
10 10	end head used for an electric power input, the coil seat having a central hole;
<u>1</u> 11	silicon steel plates, respectively mounted on two sides of the coil
11 11 112 113	seat, having a central position provided with poles extended into the central
	hole of the coil seat, the poles of the upper and lower silicon steel plates are
] =14 ≟	arranged in a staggered manner with each other;
±15	a rotor, having a rotation shaft pivotally mounted in the axial hole
[±] 16	of the upper housing and the lower housing, the rotor having a permanent
17	magnet, the permanent magnet located in the central hole of the coil seat, and
18	mating with the poles of the upper and lower silicon steel plates;
19	an actuating circuit, having an electronic control member, a hall
20	sensor, and having an electric power cord introducing electric power for
21	actuating the rotor to rotate.
22	2. The direct current brushless motor with axial winding and radial
23	air-gap as claimed in claim 1, wherein the upper housing and the lower housing
24	are additionally provided with a shaft seat, the shaft seat is provided with a

3. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 1, wherein the upper housing has a periphery having a magnetic conducting ring extending toward a vertical direction.

bearing therein, the bearing allows pivotal connection of the rotation shaft of

- 4. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 3, wherein the silicon steel plates located on the two sides of the coil seat are tightly combined with the magnetic conducting ring of the upper housing.
- 5. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 1, wherein the coil seat has positioning posts, and the silicon steel plate is provided with positioning holes, the positioning posts pass through the positioning holes, and combine with the positioning holes.
- 6. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 1, wherein the silicon steel plates located on the upper side and the lower side of the coil seat each have a periphery provided with a side wall extending toward a vertical direction of the coil seat.
- 7. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 6, wherein the side walls of the silicon steel plates located on the upper side and the lower side of the coil seat abut with each other.
- 8. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 1, wherein the silicon steel plate is provided with lugs protruding outward from a surface thereof.

- 9. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 1, wherein the actuating circuit is mounted on a circuit board.
- 10. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 9, further comprising an insulating layer, the insulating layer covering the circuit board.
- 11. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 10, wherein the circuit board covered with the insulating layer is mounted between the silicon steel plate and the upper housing.
- 12. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 10, wherein the circuit board covered with the insulating layer is mounted between the silicon steel plate and the lower housing.
- 13. The direct current brushless motor with axial winding and radial air-gap as claimed in claim 1, wherein the circuit board is provided with holes for combining with the positioning posts of the coil seat.
